Now there's MORE.

Our engineers are hard to please. The details have to be accurate

Check, adjust and re-check. Until it's right.

More attention to detail

A solid foundation is essential for any cubicle system built to last. **MORE** is 44mm thick with a rock solid core that provides the kind of stability our engineers demand.

4.4----

This enables our designers to achieve a precise, aerospace -style accuracy of just 4mm on all closure gaps.

Such attention to detail may sound obsessive but it is this culture of attention to detail on the part of our designers and installers that justifies our reputation as perfectionists and ensures that all of our systems work straight out of the box, all of the time.

More bespoke

It's this 'perfectionist' mindset that comes into its own when bespoke fitting our systems to a new location. Every fitting of a 'full height' cubicle can justifiably be described as a bespoke project, because no two sites are ever the same. However, with Prospec and, with this system in particular, there's more to it.

MORE has been designed and conceived from the outset with flexibility built-in and the adjustability to iron out whatever difficulties each project might present.

Door furniture and fittings are tough but elegant and designed to withstand a long, hard life.

MORE means less

With **MORE** there's less to worry about. And less to see. No unattractive clip-brackets, screw heads, channels, legs or supports on show – only discreet and elegant, userfriendly, minimal door furniture, beautifully engineered in best brushed stainless steel.

Prospec cubicle systems are built to last and engineered to take the day to day knocks and abuse of both normal and heavy-traffic usage in their stride, without needing a constant round of upgrades and servicing.

External door plates are discreet, with low visual impact

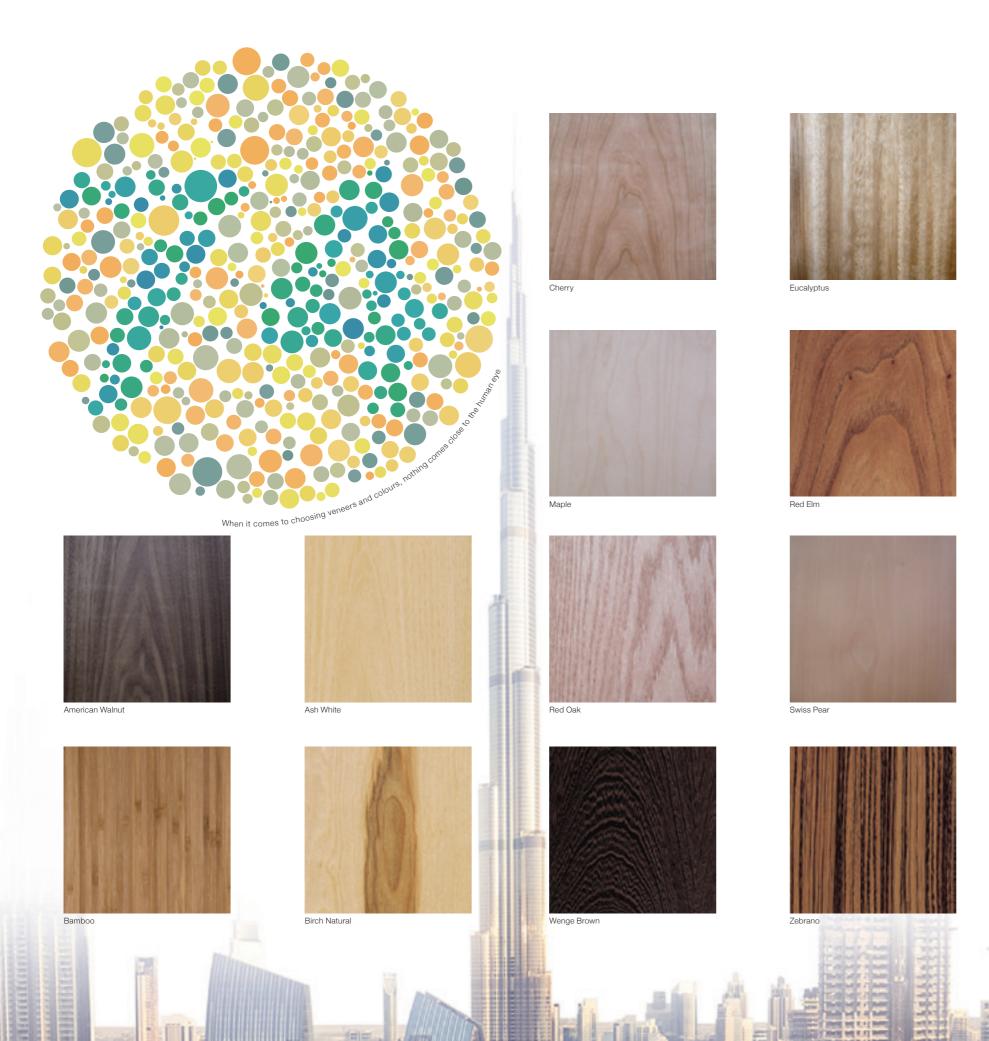

Alternative letels at declare as a sidele

Hinges too, are stainless steel and feature ball-race bearings for maximum service life.

They exude an almost tangible air of quality that has most people tempted to run their fingers over the surfaces. That is what a properly engineered bespoke, cubicle system feels like. It may look effortlessly beautiful but it's taken 40 years experience to make it that way.

MORE choice of finish

Here are just a few of the more popular veneers that we use. The list is long but if your eyesight's good enough, you can probably see the actual number in the colour blindness test on the left. Creating the perfect vision in wood veneer takes a good pair of eyes. Choosing and, more critically, matching veneers amounts to an acquired art and it takes years of practice to become an expert.

More wood

We get through very large quantities of real wood veneer from all over the world.

We are however, fortunate in two ways. Firstly, in having secured ample supply from established and well accredited sources of renewable forests and also, for being lucky enough to employ some of the best eyes in the business when it comes to selecting and matching veneers.

Seeking out suitable veneers for sometimes quite long runs of Prospec cubicles can literally be a bit of a tall order, but our chaps have not been beaten yet.

Our 'Veneerists' are also past masters at the technique of 'book-matching', an example of which is shown at top right.

An example of book matched veneers.

More style

A good pair of eyes is just as essential when selecting High Pressure Laminate. The range of RAL colours and textures is wide and runs to many pages. Colour is of course, like beauty, in the eye of the beholder. But, at Prospec we're sure you'll find the style you're looking for.

A full range of RAL colours is available in HPL.

MORE sustainability

All our wood grain veneers are supplied by long established, accredited suppliers with links to forests that are responsibly managed and committed to on-going re-planting schemes to keep them environmentally, viable, while ensuring their long-term commercial future. Proof of this is our recognition and certification by the widelyrespected Forest Stewardship Council. FSC is the accepted 'gold standard' in forestry certification. FSC is the only system supported by groups such as the WWF, Sierra Club, Natural Resources, Greenpeace, the National Wildlife Federation and the Defence Council.

Today, more than 380 million acres of forest are certified under FSC's system, including more than 150 million acres in the US and Canada.

At Prospec, we are committed to minimising our impact on all our natural resources and to constantly monitoring future developments and trends in

The mark of responsible forestry

the field from both commercial and sustainability standpoints.

More reliability

Having maintained these links over many years, we have no anticipated issues with supply and any problems that might arise can be easily resolved with little or no impact on any specific orders.

More satisfaction

We often claim, with some degree of justification, that our engineers are a lot harder to please than our customers. The reality of course, is that, if our engineers and installers weren't so picky, we might find ourselves with the odd,

less than fully satisfied client. Our chaps insist on fitting the system themselves because this, they say, guarantees the correct level of comfort and security – and thus, customer satisfaction.

We can't argue with that.

More about us

Prospec can trace its origins in glass back for over 100 years. In 1969, the company developed a worldwide glass wall market for the squash industry. Then, in the 1980's, Prospec expanded into cubicles and lockers and the Marathon brand was born. With proven brand quality, reliability and 40 years' experience in

the leisure industry, Prospec has long been considered as the market leader in lockers and cubicles.
